Introduction

Our project is an idea we came up with during the Mission Hackathon 2.0. The question we were given is “Design an application that will help a student create their future path”. We came up with the idea of making an app where the user can easily schedule their courses to create their own path. The reason why we decided to go with this idea is because a lot of people have trouble signing up for their courses, especially for people who are just starting college. We knew this was a problem from experience because we had to go through the same process as everyone else. The problem is that the process itself is very long and messy and can be frustrating for those who do not know what they are doing. For example, when you go add you class you have to go through the registration page, your schedule page, the class search page, the add a class page, and finally the submit page where it saves all your changes. This process made it a very confusing and complicated process for students. So we decided to add all those pages into one big page and that is our app.

Project features & Requirements

- Drop down Menu
 - Will make a drop down menu for the majors
- Semester System
 - Will create a semester for the user
- Scrolling Menu
 - Will scroll through all the semester
- Subtract/Add classes
 - Will allow you to add or subtract a class from your semester
- Export (INCOMPLETE)
 - Will allow user to export to pdf
- Checklist(INCOMPLETE)
 - Will give checklist for all the class

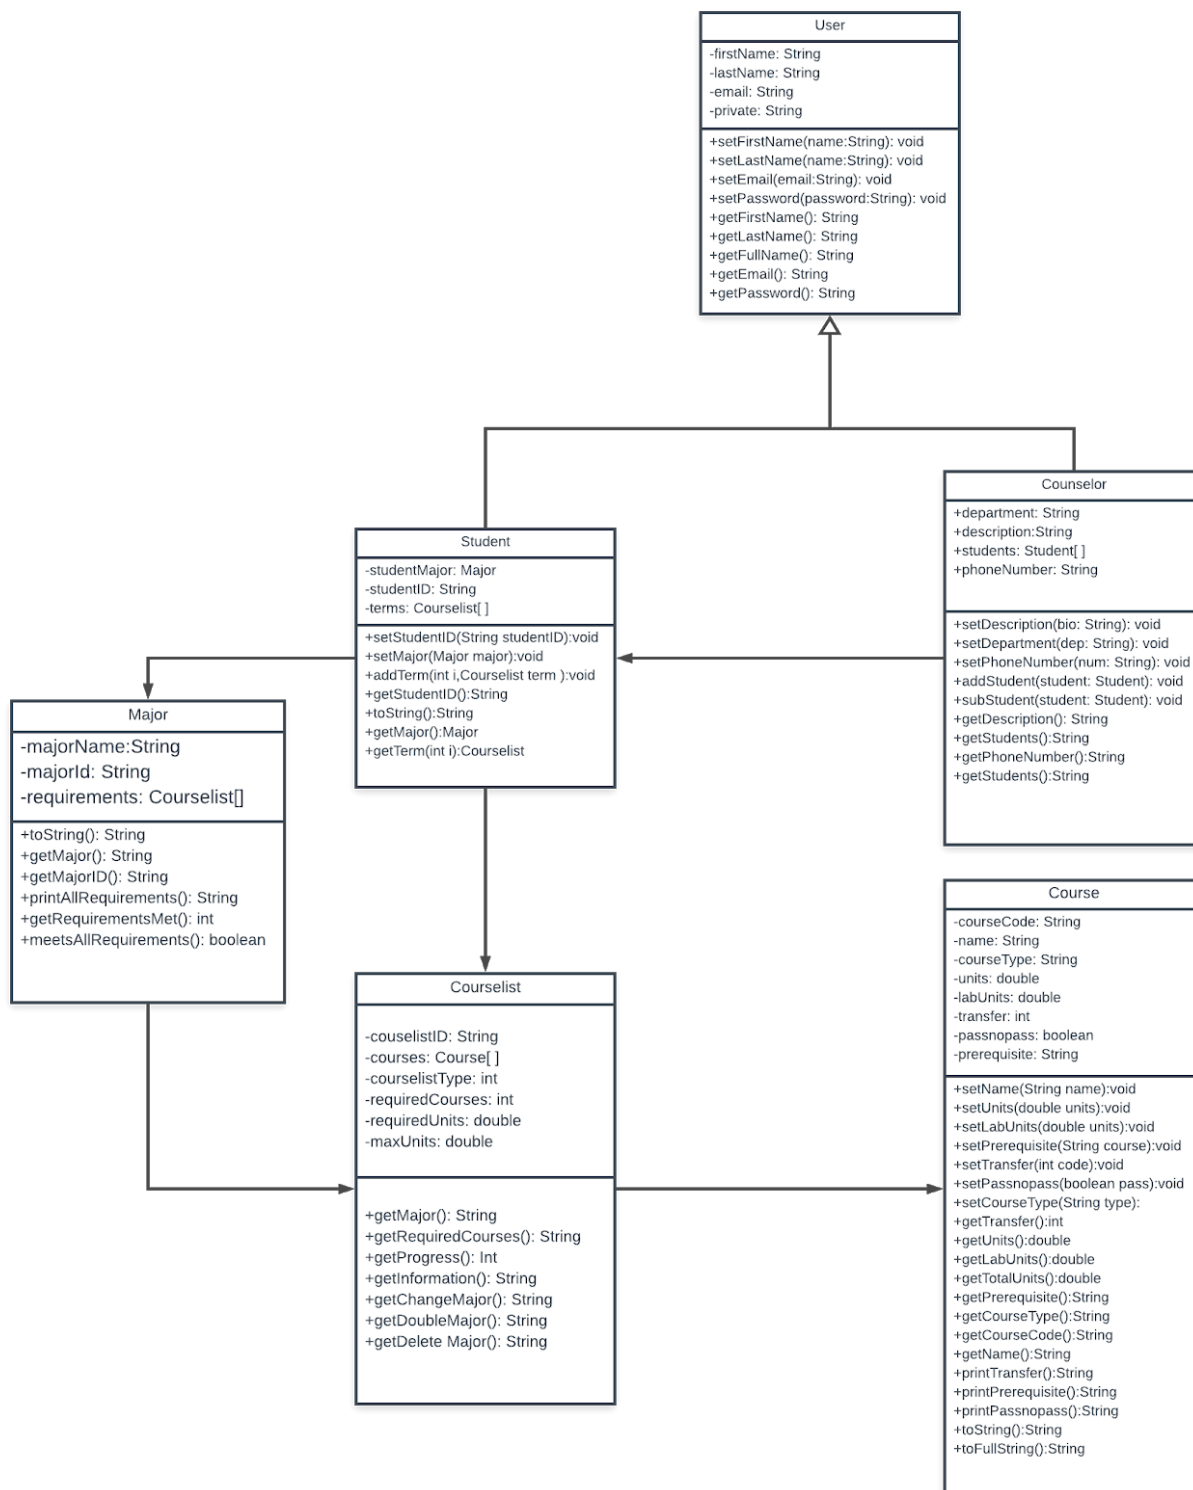

Our program allows the user to add and subtract classes from their schedule. The program then checks off all the class you have done. We wanted to add the export feature so that

you can get an overview of your schedule and be able to print it. We added a dropdown menu when you go to select your major there will be a dropdown menu where you can see all the majors you can choose from. The user is then allowed to plan out their semester because the program allows them to create a semester. Not only will you be able to see your current classes and your upcoming classes, but also all the classes you have taken before.

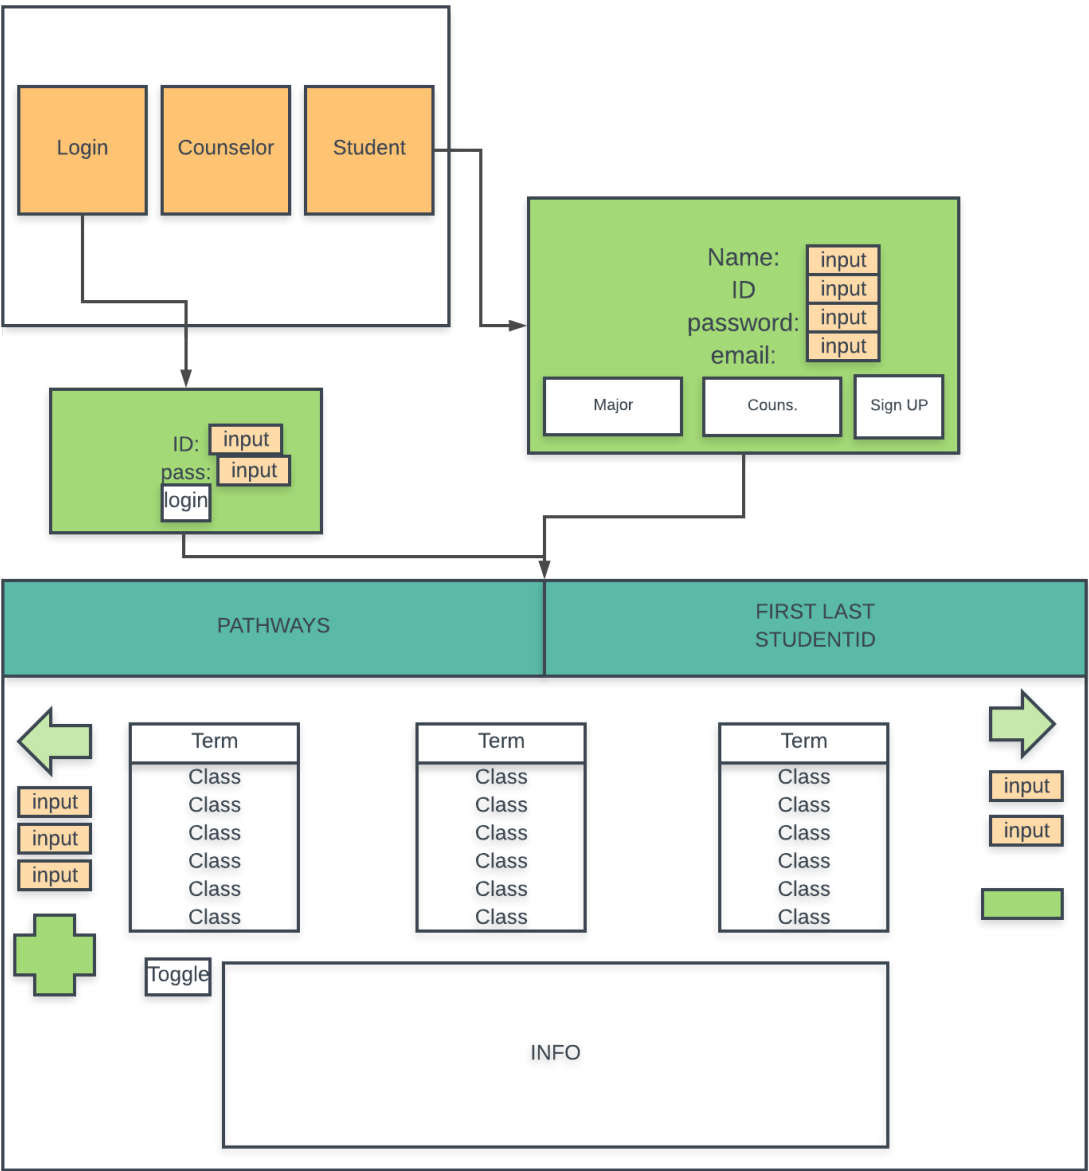

Project Analysis & Design

1. User opens the Application
2. Program opens the login screen
3. User proceeds to enter name, email, and id number
4. User selects major from dropdown menu
5. User clicks “GO” to login
6. Main page is opened
7. User sees the semesters taken, present, and future
8. User sees the progress of completing their major
9. User sees all the courses that are required for that major
10. User wants to make a new semester
11. User clicks on the “Add” button and it creates a new semester
12. User wants to add a course
13. User clicks on the “Edit” button
14. User then selects a checkbox to add a course to the semester
15. If user wants to delete that course user can subtract it by using the “Edit” button
16. User wants to see classes taken
17. User clicks the “Arrow” button on the left and sees semesters that user has taken
18. If user wants to see future semesters user clicks the “Arrow” button on the right
19. User wants to see an overview of schedule and wants to print it
20. User clicks on the “Export” button
21. Program exports the page
22. User is satisfied and can close the application

Source Code

File Description

Our program contains many classes:

- Course.java
 - Create a course object to store course data.
- Counselist.java
 - Create a Course List to store different types of list of Courses
- Major.java(Unused)
 - Create a major containing Requirements for each major
- User.java
 - Create a User with all User data.
- Student.java
 - Create a Student which extends User by including data for the Student
- Counselor.java(Unused)
 - Create a Counselor which extends User by including data for the Counselor
- Data.java
 - Our “DataBase” for storing all the Data
- Welcome.java
 - Create the main menu which would allow users to Login or Register
- Login.java
 - Create a Login page for a pre existing User to Login and access Schedule
- Registration.java
 - Create a Registration page for a pre existing User to Register and access Schedule
- Schedule.java
 - Display User Schedule and allow User to edit their Schedule
- Test.java
 - A Test file to run the program and hold a temporary current User

Data Classes

Course.java

```

Conclusion

Our app is for any student who wants to keep track of their pathway to success. Also our app is for counselors who want to see what their students schedule is like so they can help them improve on it. This app will help guide the user through college to make it to a better life in the end. It is simple and fast so that anyone who has never used our app can use it immediately. In the future we would like to publish this app so that everyone who wants to use can use it on Android and Apple phones. In conclusion, we want to thank our professor and the class for being so good.
